

Universal Instrumentation Amplifier for strain gage, potentiometric, DC/DC and incremental sensors

TEDS

Amplifier module 9250

Bus controller 9251

8 measurement channels

Highlights

- Ultra-fast pushbutton configuration
- Non-linearity < 0,005 % F.S.
- Outputs ±10 V, ±5V and 0 (4) 20 mA
- 6 wire technique
- Automatic sensor recognition due to burster TEDS
- Adjustable cut-off frequencies
- Versatile configuration using DigiVision PC software via USB port

Options

- Digital I/O to the PLC
- Increased sampling rate up to 14.4 kHz
- Interface for the connection to bus controller 9251
- TTL input for incremental sensors

Applications

- All areas of mechanical engineering
- Assembly and joining equipment
- Hydraulic presses
- Measurement of cable strengths

Product description

The new 9250/9251 amplifier generation unites all the features that make modern measurement data acquisition actually possible for the first time. Network-compatible, high-precision, user-friendly, smart and versatile: the combined system of amplifier module and bus controller can be integrated into any existing setup. The amplifier 9250 takes signals exactly to the point where they can be combined, monitored and linked efficiently to other data. The fieldbus interfaces give you flexibility, speed and perfect connections, and save you time, money and other resources when integrating your measurement setup with existing systems. Automatic sensor recognition due to burster TEDS lets you play absolutely safe, protecting you from setting incorrect parameters.

The broad supply voltage range permits operation on standard power supplies used in switch gear cabinets. A highly accurate precision amplifier performs the amplification of the sensor signal being applied. The latest microprocessor technology made a 24 bit AD conversion with high accuracy possible. The sensor excitation is performed by the amplifier module itself so that no additional voltage source is required. It can also be set in steps of 2.5 V, 5 V, 10 V using configuration software DigiVision. The maximum feed current of 40 mA permits parallel connection of several strain gages sensors, e.g. for the addition of measurement variables. Measurement errors brought about by varying line lengths or due to temperature fluctuations effecting the sensor cable are avoided by having probe lines measuring the actual feed voltage directly on site at the sensor itself (6 wire technology). The cut-off frequency of the amplifier can be switched between 10 Hz and 1 kHz.

Technical Data

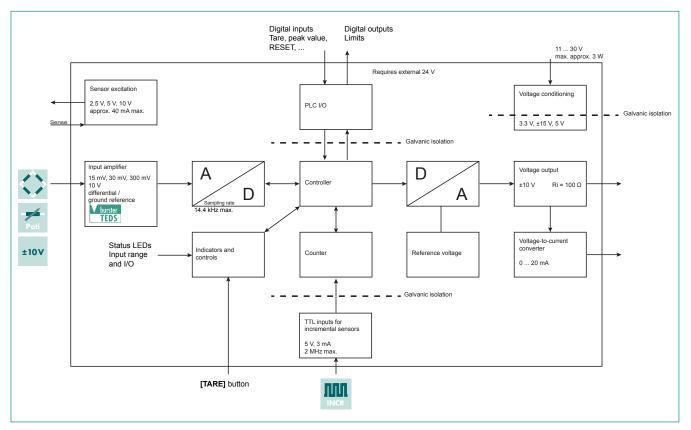

Connectable sensors							
Strain gage full bridge							
Excitation voltage	2.5 / 5 / 10 V, configurable, short-circuit proof						
Connection technology	4 or 6 wire, automatic recognition						
Excitation current	approx. 40 mA						
Input impedance	1 GOhm						
Measuring ranges	±15 mV, ±30 mV, ±300 mV						
Potentiometer							
Excitation voltage	5 V						
Excitation current	max. 40 mA						
Resistance	>200 Ohm						
Input impedance	1 GOhm						
Voltage metering							
Measuring range	±10 V						
Input impedance	1 GOhm						
TTL inputs							
Level	TTL, SV, approx. 3 mA, galvanically isolated from amplifier						
Counter depth	32-bit, 4 counter increments						
Cut-off frequency	2 MHz						
Analog outputs							
Voltage outputs	±5 V or ±10 V						
Internal resistance	100 Ohm						
Current output	0 20 mA or 4 20 mA, Load 50 up to 500 Ohm						
Filter	without, 4 Hz - 700 Hz in discrete bands						
PLC IO							
Two inputs	PLC level DIN 61131						
Function	Tare, peak-value buffer reset, limits reset, HOLD, counter reset						
Response time	20 ms						
Two outputs	PLC level DIN 61131, p-switched, max. 500 mA, 24 V external supply necessary, Inputs and outputs galvanially isolated from amplifier, Function configurable via USB						
Function	Above limit, below limit, window modus						
Response time	<0.5 ms						
Housing							
Material	polyamides, metal housing inside						
Dimensions	115 x 110 x 22.5 mm ³						
Weight	approx. 210 g						
Protection class	IP20						
Connections	Screw clamps, up to 2.5 mm ²						

Technical Data

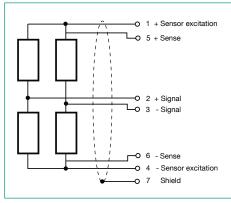

General data						
Supply voltage	11 30 V DC, Galvanic separation, overvoltage and pole protection					
Capacity	approx. 3 W					
Sensor recognition	burster TEDS					
Operating temperature range	0 +60 °C					
Storage temperature range	-25°C +70 °C					
Humidity	0 70 % non condensing					
Installation	grounded mounting rail 35 mm to DIN EN 50022					
Electrical isolation	Instrumentation amplifier, TTL inputs, PLC IO, supply voltage					
Error limit	±0.03 % F.S.					
AD conversion	24-Bit					
DA conversion	16-Bit					
Max. measuring rate	14400 (option), 1200 standard					
Non-linearity	< 0.005 % F.S.					
Temperature coefficient Gain	< 15 ppm F.S. / K					
Input zero drift	< 0.1 µV / K					
Common mode rejection (CMRR)	140 dB (Bei DC)					
Interfaces	Micro USB for configuration					
Ripple & Noise at voltage output	approx. 5 mVss at 1200 meas./s					
Other	Teach-in via button, tare function via button, I/O configuration via button or USB

The amplifier module model 9250 is used wherever measurement signals from strain gage, potentiometric sensors or DC/DC sensors have to be converted into standard signals. Simply by mounting on conventional DIN-mount rails, it is possible to position the amplifier module on location, in the proximity of the sensor.

- Convenient device configuration via front-panel USB port
- Automatic recognition of amplifier modules in DigiVision
- Manage a range of parameter sets
- Backup facility for storing settings
- Choice of output parameter (current or voltage)
- Bus controller configuration via USB
- Manual configuration of calibration data in the module

Accessories

Order Code	
9900-K358	USB cable for configuration
9250-Z001	1 set of terminals (included in scope of delivery)

Calibration for instrumentation amplifiers

Standard factory calibration certificate for instrumentation amplifiers (WKS)				
Optionally available	Our standard factory calibration certificate includes 11 measurement points, starting at zero, spread evenly in 20% steps over a measuring range.			
Special factory calibration certificate for instrumentation amplifiers (WKS)				
On request	We are happy to calibrate instrumentation amplifiers to the customer's specification.			
German-accredited DAkkS calibration certificate for instrumentation amplifiers (DKD)				
Optionally available	Our DAkkS-certified calibration laboratory provides calibration certificates. The calibration certificate inclu- des 21 measurement points, starting at zero, spread evenly in 10% steps over a measuring range.			

Calibration for measurement chains

Standard factory calibration certificate for measurement chains (WKS)			
Optionally available	Our standard factory calibration certificate includes 11 measurement points, starting at zero, spread evenly in 20% steps over the full measuring range, for increasing and decreasing load under the same installation conditions. Factory calibrations can be performed in the compression and/or tension direction depending on the sensor type.		
Special factory calibration certificate for measurement chains (WKS)			
On request	We are happy to calibrate sensors and measurement chains to the customer's specification.		
German-accredited DAkkS calibration certificate for measurement chains (DKD)			
Optionally available	Our DAkkS-certified calibration laboratory provides calibration certificates to DIN EN ISO 376. The cali- bration certificate includes 21 measurement points, starting at zero, spread evenly in 10% steps over the measuring range, for increasing and decreasing load under various installation conditions. DAkkS calibra- tions can be performed in the compression and/or tension direction depending on the sensor type.
